SERIAL SEQUENTIAL STIMULATION

The "3S" program list includes 54 parameter combinations. The "3S" programs are characterized by a delay activation of the channels 3 and 4 compared with the channels 1 and 2. The Serial Sequential Stimulation permits to stimulate the musculature in kinetic chain thanks to the differentiate activation times of the muscular groups involved.

ACTION NOW

The Action Now program list includes 84 parameter combinations. This mode is suggested in sport field for athletic preparation where you wish to add the muscular contraction induced by a stimulator to a work made with overloads in dynamic and isometric form.
