

The step is made of a solid metal frame, covered with white or black powder varnish and durable wooden plywood with a non-slip surface.

Rubber feet on the feet secure the ground and prevent the step from sliding.

Metal step is an indispensable piece of equipment for a physiotherapy or massage room. It facilitates safe going up and down from the couch.

The metal step is distinguished by:

- solid frame protected with powder paint,
- non-slip surface,
- non-staining rubber feet.

Technical data:

Width	30 cm
Length:	40 cm
Height:	22,5 cm
Weight	3 kg
